

Do Together - The Tower of Hanoi

A do together demonstration is a project that I'm going to complete with you. The problem and solution discussion will be fairly one-sided given that it's a video, but the goal is you attempt to do the project with me by (1) observing how I work through the problem and (2) do it with me.

This week we will tackle the [Tower of Hanoi](https://en.wikipedia.org/wiki/Tower_of_Hanoi) (https://en.wikipedia.org/wiki/Tower_of_Hanoi). This is a very complex problem, but will allow us to work through recursion. In the demonstration I will work through a recursive script in Python. First, we'll have to define our objects.
