Do Together - A Simple Stack

A do together demonstration is a project that I'm going to complete with you. The problem and solution discussion will be fairly one-sided given that it's a video, but the goal is you attempt to do the project with me by (1) observing how I work through the problem and (2) do it with me.

In this week's demonstration I will walk through creating a stack, constructing a list, adding and removing elements, and returning our remaining stack length.
