Do Together - Anagram Analysis

A do together demonstration is a project that I'm going to complete with you. The problem and solution discussion will be fairly one-sided given that it's a video, but the goal is you attempt to do the project with me by (1) observing how I work through the problem and (2) do it with me.

This week's demonstration walks through a simple anagram analysis program. This will build on some of the code provided in this week's module.
